

Fleet Vol 1

Three tested skills for coding agents: PowerShell 7, a real browser over CDP, and Bevy 0.19.1.

VERSION	1.0.0
WORKS WITH	Claude Code, OpenCode
TESTED ON	Windows 10

3

skills in one zip; each is also its own zip

49

bash-to-PowerShell pairs, each run in PowerShell 7.6.3

\$19

once, with every file listed in manifest.json

01

What is inside

pwsh-for-bash-writers	Fixes agents that type grep, head, tail, sed, awk or && into PowerShell 7 and watch the call fail.
real-browser-automation	A 30 KB Node script with no packages drives your installed Edge or Chrome over the DevTools protocol. Loopback only, three guard layers.
bevy-rust-ecs	Fixes old Bevy names that no longer exist. Every Bevy 0.19.1 name has its file and line.

02

Install

1	2	3
Unzip the pack Unzip fleet-vol-1.zip. It holds skills/, zips/ and proof/.	Copy the skills Copy the folders in skills/ to the skills folder of Claude Code or OpenCode.	Check Ask the agent which skills it has, or run opencode debug skill --pure.

03

Proof

Tests passed for all three skills: 7, 11 and 42. The first two ran real programs; the Bevy tests check its 0.19.1 source.		
METHOD	DATE	SOURCE
PowerShell 7.6.3, real Edge and Chrome on 127.0.0.1, the Bevy 0.19.1 source tree	3 October 2026	Records in proof/ inside the zip

Written by AI coding agents, then every example and claim was checked by tests. Measured on Windows 10, not tested on Linux or macOS. The Bevy skill was read from source: nothing in it was compiled.
